

Thickened Rust-proof Distribution Box

Article Overview

A thickened rust-proof distribution box is typically made from stainless steel or galvanized steel, designed for durability, corrosion resistance, and protection in harsh environments.

Material and Construction

Thickened distribution boxes are often constructed from stainless steel or cold-rolled steel plates with thicknesses ranging from 1mm to 2mm, providing high mechanical strength and resistance to deformation . Stainless steel offers superior corrosion resistance, making it ideal for humid, salty, or outdoor environments, while galvanized steel provides a zinc-coated sacrificial layer to prevent rust, especially in outdoor or high-moisture areas . Some boxes also feature phosphating treatment and electrostatic spray finishes to enhance rust protection and durability .

Protective Features

These boxes are designed to safeguard electrical components from environmental hazards:

- IP Ratings: Many thickened boxes achieve IP65, ensuring protection against dust and water ingress, suitable for both indoor and outdoor installations .
- Fire Resistance: Flame-retardant materials and robust steel construction help contain potential fire hazards .
- Mechanical Strength: Reinforced doors, locks, and hinges provide impact resistance and prevent accidental damage
