

Thickened cover plate for cable trays

Article Overview

Thickened or reinforced cable tray covers provide enhanced protection against mechanical impact, environmental exposure, and overfilled trays.

Purpose and Benefits

Thickened cover plates are designed to increase structural strength and durability of cable trays. They protect cables from falling debris, heavy loads, and environmental factors such as sunlight, dust, and moisture, making them suitable for both indoor and outdoor applications. In areas with high traffic, overhead exposure, or seismic activity, thicker covers help prevent deformation and maintain cable integrity.

Common Designs

- Flat Covers: Economical and space-efficient, suitable for corridors and data centers. Can be supplied with or without flanges for improved sealing.
- Hat-Shaped (Dome) Covers: Provide extra clearance for overfilled trays and deflect falling objects. Available in solid or corrugated ventilated tops, often in 2" or 4" heights.
- Corrugated or Peaked Covers: Reinforced structure without significant weight increase, ideal for outdoor or industrial environments.
- Flanged Covers: Improve sealing in clean or controlled environments, preventing dust or contaminants from entering the tray.
