

# Types of Explosion-proof Lighting Distribution Boxes

## Article Overview

Explosion-proof lighting distribution boxes are specialized electrical panels designed to safely distribute and control power in hazardous environments, preventing ignition of explosive gases or dust.

### Overview and Function

Explosion-proof lighting distribution boxes are engineered for environments where flammable gases, vapors, or combustible dust may be present, such as petroleum, chemical, pharmaceutical, metallurgical, and offshore industries . Their primary function is to safely distribute electrical power to lighting systems, motors, and other equipment while preventing sparks, arcs, or high temperatures from igniting the surrounding atmosphere . These boxes combine flameproof (Ex d) and increased safety (Ex e) technologies, often with compartmentalized layouts to reduce maintenance risks and improve operational safety .

### Specifications and Models

Explosion-proof distribution boxes come in a variety of models and materials, including metal and flame-retardant plastic, and support different voltage levels such as 220V, 380V, and up to 690V AC or 500V DC . Common types include:

- PZ20 and PZ30 series: Terminal lighting distribution boxes
- PZ40 and XDD(R): Electric metering boxes...
