

Welding of Network Cabinet Base

Overview

Electrical enclosures are often made using MIG, TIG, Stick, Flux-cored, or Laser welding. The choice depends on the metal type, thickness, and production needs. MIG and TIG are the most common for steel or aluminum enclosures, while laser welding works best for large batches. Conclusion – Welding as the foundation, finishing as craftsmanship In modern telecom infrastructure, from 5G base stations to outdoor transmission nodes, communication cabinets play a critical role in protecting mission-critical equipment and ensuring system reliability. Yet in practice, a common. Watch the SENFENG Laser SF350CMW collaborative robot arc welding system perform precise spot welding on a 1mm cold-rolled steel network cabinet base. State of the art welding equipment including cold weld technology reduces warpage & distortion on large complex welded frames. It keeps out dust, water, and damage, making sure the system runs safely and lasts longer.
