

What are the dimensions of an indoor power distribution box

Article Overview

Indoor power distribution boxes typically range from small wall-mounted units of 300 × 300 × 150 mm to larger freestanding cabinets up to 2200 × 1800 × 600 mm, depending on application and capacity.

Typical Sizes

Wall-Mount Distribution Boxes:

- Small residential or light commercial panels: 300 × 300 × 150 mm, 400 × 300 × 200 mm
- Medium panels for multiple circuits: 600 × 400 × 200 mm These sizes are common for indoor use and allow space for circuit breakers, bus bars, and wiring while maintaining accessibility for maintenance and future expansion . Freestanding or Floor-Standing Cabinets:

- Industrial or large commercial applications: 1600–2200 mm height, 600–1800 mm width, 300–600 mm depth These enclosures accommodate higher amperage systems, PLCs, relays, and other control equipment, often with provisions for ventilation, cable entry, and spare capacity .

Electrical Capacity and Circuit Considerations

- Residential breaker panels typically range from 12 to 42 circuits, with some double-meter panels for multi-unit installations
