

What are the heating modes for fiber optic heat shrink tubing

Overview

Older designs like the Tritec HSOII and the popular Fujikura 62S utilise a manual single sided heated tray, whilst the latest fusion splicer ovens including the Fujikura 70S utilise an automatic dual heater clamping plate design. It is necessary to consult the user guide and set-up menu of the device in use for available settings. For older units that don't address Splice on Connectors specifically, a 40mm setting can be used. Heat Shrink tubing from Zeus provides a superior level of protection against extreme temperatures and hostile environments. The outer heavy wall can provide reliable external protection, and high-performance hot melt adhesive can provide dependable waterproof performance and prevents leakage of the gas inside the closure. The product consists of a reinforced 304 stainless steel rod or a ceramic rod, a hot fusion tube and a cross-linked polyolefin tubing. Standard color: clear FOSP. This specialized tubing is designed to protect and secure optical fibers, providing a durable and reliable layer that can withstand the harsh environments commonly encountered in telecommunications.
