

What are the quotas for cable trays

Article Overview

Cable trays are generally subject to trade quotas or import/export restrictions based on their classification under electrical equipment or metal fabrication categories, but the exact quota item depends on the country's customs tariff schedule.

Understanding Quota Application

A quota is a government-imposed limit on the quantity or value of goods that can be imported or exported within a specific period . For cable trays, the quota item would typically fall under categories related to electrical equipment, metal cable management systems, or fabricated metal products. The classification is often determined by the Harmonized System (HS) code used in international trade.

Relevant Standards and Compliance

Cable trays must comply with standards such as:

- NEC Article 392: Governs cable tray systems, including fill limits, grounding, and approved cable types .
- IEC 61537: Covers mechanical load capacity, electrical continuity, and corrosion resistance for trays and ladders .
- ASTM and NEMA standards: Specify material quality, galvanization, and construction requirements for metallic trays . These standards ensure that cable trays meet safety, durability, and performance requirements, which can influence their classification for trade purposes....
