

What are the uses of fiber optic green patch cords

Overview

It is mainly used in applications such as optical fiber communication systems, optical fiber access networks, optical fiber data transmission networks, and local area networks. Blue Patch Cords: Typically, blue patch cords are used for multimode fibers. Multimode fibers can carry multiple light rays simultaneously, making them ideal for shorter distances and higher. A fiber optic patch cord (fiber jumper) is: Typical applications: A patch cord is the “bridge” that connects two fiber devices and lets them talk to each other. Behind its slender appearance lies the fusion of core types, connector types, and polish levels, each chosen for a specific application. As data rates increase from 10G → 100G → 400G → 800G, patch cables must handle more bandwidth, more density, and stricter.
