

What equipment is used for slotting electrical distribution boxes

Article Overview

Slotting electrical distribution boxes requires a combination of hand tools, power tools, and industrial machinery depending on whether the work is installation or production.

Hand and Power Tools for Installation

For on-site installation and slotting of distribution boxes, technicians typically use a variety of hand and power tools to create openings for wiring and components:

- Screwdrivers (flathead and Phillips): For removing or securing screws on the box and cover .
- Pliers (lineman's and needle-nose): To hold, twist, and manipulate wires in tight spaces .
- Wire strippers: Essential for removing insulation from wires before connecting them .
- Measuring tape and utility knife: For precise marking and cutting of slots or openings .
- Level: Ensures the box is mounted straight and aligned .
- 9/16-inch wrench: Often required for securing hardware .
- Drills and impact drivers: Used to create pilot holes or enlarge openings for conduits and fittings .
- Hole saws: Commonly used to cut circular slots for cable entry .
- Banding tools: Stainless steel bands, buckles, tensioning tools, and metal shears a...
