

What is ALL All electrical distribution box

Article Overview

An ALL electrical distribution box is a centralized unit that manages and distributes electricity to all circuits in a building, providing control, protection, and safety for the entire electrical system.

Overview

An electrical distribution box, also called a distribution board, breaker panel, or panel board, is the central hub of a building's electrical system. It receives power from the main supply and divides it into multiple subsidiary circuits, each protected by a fuse or circuit breaker to prevent overloads and short circuits . The term "ALL" typically implies that the box handles all incoming electrical circuits, serving as the main distribution point for the entire property.

Components

Key components inside an ALL electrical distribution box include:

- Circuit breakers or fuses: Protect individual circuits by interrupting power during overloads or faults .
- Busbars: Conduct and distribute electricity evenly to multiple circuits .
- Residual Current Devices (RCD/RCCB/RCBO): Detect leakage currents and prevent electric shocks .
- Switches/isolators: Allow manual control and safe maintenance of circuits .
- Surge Protective Devices (SPD): Protect equipment from voltage spikes .
- Earthing connections: Ensure proper grounding for safety and system stability . O...
