

What is the packet loss rate of a 10 Gigabit optical module

Overview

The network is achieving a throughput of 10 Gbps with an impressive packet loss rate of 0. The mean time between failures (MTBF) is recorded at approximately 100,000 hours. The Cisco ® 10GBASE SFP+ modules (Figure 1) give you a wide variety of 10 Gigabit Ethernet connectivity options for data center, enterprise wiring closet, and service provider transport applications. For 10 Gigabit Ethernet applications a power penalty is allocated to the link power budget. They are compliant with SFF-8431, SFF-8432 and IEEE 802.3ae 10GBASE-LR/LW, and 10G Fibre Channel 1200-SM-LL-L. Digital diagnostics functions are available via a 2-wire serial interface. Unlike previous Ethernet standards, 10GbE defines only full-duplex.

Ethernet Statistics — The Packet Company

We now have sufficient information to calculate the maximum packet rate on a 10G link: $10\text{Gbps} / (84\text{ bytes} * 8\text{ bits}) = 14.88\text{Mpps}$. But the data rate that will be reported by most tools is significantly less, ...
