

# What material is best for fireproof cable trays

## Article Overview

Steel and thermosetting resin fiberglass-reinforced plastic (FRP) are among the best materials for fireproof cable trays due to their high fire resistance and structural integrity.

### Steel Cable Trays

Steel is widely recognized for its high fire resistance and structural strength. Steel trays can withstand extreme temperatures without losing integrity, making them suitable for industrial, commercial, and high-risk environments. They are often rated Class A or B according to ASTM E84 tests, ensuring compliance with fire safety standards. Steel trays can also be coated with fire-retardant paints to further enhance their resistance to heat and flame propagation .

### Aluminum Cable Trays

Aluminum trays are lightweight and corrosion-resistant, but their fire resistance is generally lower than steel. To improve safety, aluminum trays are often treated with fire-retardant coatings. While suitable for certain applications, they may not perform as well as steel or FRP in high-temperature fire scenarios .

### Fiberglass-Reinforced Plastic (FRP) Cable Trays

FRP trays, made from fiberglass and resin, are increasingly used in environments pr...
