

# What quota should be applied to the maintenance of optical cable lines

## Article Overview

Maintenance of optical cable lines should follow ITU-T L.25 guidelines, emphasizing preventive and post-fault maintenance with periodic testing, surveillance, and network element control.

### Preventive Maintenance

Preventive maintenance is aimed at avoiding faults before they occur and includes three main activities: periodic testing, fibre degradation testing, and network element (NE) control . Key aspects include:

- Periodic Testing: Regularly measure fibre loss, strain distribution, and water penetration to detect early signs of deterioration .
- Fibre Degradation Testing: Monitor for hydrogen absorption, tensile strain, bending, or alignment changes that can increase fibre loss .
- Network Element Control: Identify, transfer, and splice fibres as needed, using spare or multiplexed active fibres without disrupting transmission . The frequency of these activities should be scheduled based on network criticality, environmental conditions, and historical fault data, ensuring early detection of potential issues.

### Post-Fault Maintenance

Post-fault maintenance addresses issues after a fault occurs and involves:...
