

What type of electrical distribution box is a residential electrical distribution box

Article Overview

A residential electrical distribution box is typically a consumer unit or breaker box that safely distributes incoming power to individual circuits in a home while providing overcurrent protection.

Overview

A residential electrical distribution box, also called a consumer unit, load center, or breaker box, is the central hub of a home's electrical system. It receives power from the utility supply and divides it into multiple branch circuits that supply electricity to lights, outlets, appliances, and other devices throughout the house. The enclosure protects users from live parts and safeguards the internal components from dust, moisture, and physical damage.

Key Components

Typical residential distribution boxes include:

- Main Circuit Breaker: Controls the overall power supply to the home and provides a disconnect point for maintenance.
- Miniature Circuit Breakers (MCBs): Protect individual circuits from overloads and short circuits.
- Residual Current Devices (RCDs) or RCBOs: Provide protection against earth faults and leakage currents
