

Where to connect the live wire in a level 3 distribution box

Overview

Live (L) Wire Connection: In a distribution box setup, the incoming live wire (also known as phase or hot wire, denoted as L or Line) connects to the line terminal of the circuit breaker. This serves as the primary source of electrical energy from the mains supply. **Wiring Direction:** Wiring between the main circuit breaker and each branch circuit breaker in the box generally. In this video, we'll walk you through the process of wiring a home distribution box with a detailed connection diagram. Check for proper IP/NEMA ratings and material quality. Welcome to our comprehensive animated guide on home distribution. Distribution board is a safe system designed for house or building that included protective devices, isolator switches, circuit breaker and fuses to connect safely the cables and wires to the sub circuits and final sub circuits including their associated Live (Phase) Neutral and Earth conductors.
