

Why is the router s fiber optic cable indicator light on

Article Overview

A solid or blinking fiber optic indicator light on your router usually shows the status of the optical signal from your ISP, indicating either normal connectivity or a signal issue.

Understanding the Light

The fiber optic light on your router or ONT (Optical Network Terminal) is typically labeled as PON (Passive Optical Network) or LOS (Loss of Signal). Its behavior conveys the following:

- **Solid Green Light:** The router is receiving a proper optical signal from the fiber network, and the connection is functioning normally .
- **Blinking Light:** This may indicate that the router is attempting to establish a connection or that the optical signal is fluctuating .
- **Red or LOS Light On:** Signals a loss of optical signal, which could be caused by a loose or damaged fiber cable, dirty SC/APC connector, or a temporary ISP outage .

Common Causes for the Light Being On

- **Normal Operation:** If the light is solid green, it simply confirms that the fiber connection is active and the router is communicating with your ISP .
- **Signal Issues:** A blinking or red light may indicate abnormal signal levels, a physical disconnection, or a dirty connector .
- **Power or Device Status:** Ensure the router and ONT are powered on; a powered-of...
