

Wide-area FC single-mode optical module

Article Overview

Wide-area Fibre Channel single-mode optical modules enable high-speed, long-distance SAN connectivity using single-mode fiber, supporting data rates up to 32G and beyond.

Overview

A Fibre Channel (FC) single-mode optical module is a specialized transceiver designed for high-speed, lossless data transmission in storage networks. It converts electrical signals from FC switches or host bus adapters (HBAs) into optical signals for transmission over single-mode fiber (SMF), which allows light to travel in a single, straight path, minimizing signal loss over long distances . These modules are essential for wide-area SAN deployments, interconnecting data centers or remote storage arrays.

Key Features

- Form Factor: Commonly SFP, SFP+, or SFP28, with hot-swappable designs for easy maintenance .
- Data Rates: Supports legacy speeds (8G, 16G) and modern 32G FC, with future modules targeting 64G and higher .
- Transmission Distance:
- LR (Long Reach): Up to 10 km over single-mode fiber, using DML laser and PIN photodetector .
- ER (Extended Reach): Up to 40 km, using EML laser and APD photodetector .
- CWDM (Coarse Wavelength Division Multiplexing): 10 km with multiple wavelengt...
