

Wire mesh back panel of distribution box

Article Overview

A wire mesh back panel is a durable steel mesh barrier installed in distribution boxes or pallet racks to prevent items from falling, enhance safety, and maintain visibility and airflow.

Purpose and Benefits

Wire mesh back panels serve as a protective barrier in distribution boxes, pallet racks, or shelving systems. They prevent stored items such as boxes, pallets, or electrical components from falling, reducing the risk of workplace injuries, product damage, and inventory loss. These panels also help maintain a clean and organized environment, improve compliance with safety regulations, and allow visibility and ventilation for stored items .

Construction and Materials

- **Material:** Typically made from heavy-duty steel wire mesh, often welded for strength. Common specifications include 2" x 2" x 10-gauge mesh with a steel frame .
- **Durability:** Steel construction ensures long-term use with minimal maintenance, outperforming alternatives like nylon netting or rope .
- **Customization:** Panels can be custom-sized to fit different rack or enclosure configurations and may include offsets to accommodate overhanging items .

Installation

- **Mounting:** Panels are usually bolted or bracket-mounted to the back of racks or di...
