

Wiring Method for Czech Explosion-Proof Distribution Boxes

Article Overview

Czech explosion-proof distribution boxes, such as the CZ1290, require certified cables, proper grounding, and adherence to IECEx/ATEX standards for safe wiring in hazardous environments.

General Wiring Guidelines

- **Power Isolation and Safety** Before any wiring, ensure the main power supply is turned off to prevent electrical hazards. Use circuit breakers or isolating switches to disconnect the supply safely .

- **Cable Selection** Use explosion-proof certified cables suitable for hazardous areas (EX or ATEX marked). Cables should be flame-resistant, impact-resistant, and mechanically robust to prevent sparks or arcs from escaping the box .

- **Internal Wiring Components**

- **Terminal Blocks:** Connect incoming power to the designated “live” terminals. Ensure neutral, live, and earth wires are correctly assigned.

- **Leakage Protection Switches:** For three-phase four-wire systems, use 63A-100A switches; for 220V single-phase, 32A switches are recommended. Mount switches securely with bolts or on rails fixed with self-tapping screws .

- **Sockets:** Use 10A for two-pin and 16A for three-pin 220V outlets .

- **Wire Specifications**

- **380V Power Lines:** 6-8 mm² single-core copper wires in red, yellow, and green.

- **220V Power Lines:** 2.5 mm² single-core copper wires in red and blue.

- **Grounding:** 2.5 mm² green-yellow striped wire. Maintain proper grounding to ensu...
