Article Overview

Concealed wiring hides electrical wires within walls, ceilings, or floors using concealed boxes and conduits, providing safety, durability, and a clean aesthetic.

What is Concealed Wiring?

Concealed wiring is the practice of installing electrical wires inside walls, ceilings, or floors rather than on the surface. This method improves the visual appeal of a space, protects wires from physical damage, moisture, and heat, and reduces the risk of electrical hazards. It is commonly used in modern homes and commercial buildings to maintain a neat and organized appearance while ensuring long-term durability.

Concealed Electrical Boxes

A concealed electrical box is an enclosure installed inside walls or panels to house switches, outlets, or junctions. These boxes, also called modular boxes or mounting boxes, provide protection for wiring and ensure compliance with building codes. They are available in plastic or metal variants and come in various sizes and modules to accommodate different electrical components. Features include multiple knockouts for flexible wiring directions and compatibility with various devices.
