

Working principle of 100M optical module

Overview

An optical transceiver module, often simply called an optical module, acts as a signal conversion interface in fiber optic networks. Among various optical module form factors, SFP (Small Form-Factor Pluggable). As an essential component of optical fiber communication, optical modules are optoelectronic devices that facilitate the conversion between optical and electrical signals during the transmission process. Also known as Fast Ethernet SFPs or 100BASE modules, these transceivers are far from obsolete. This article explores the enduring applications of 100M. SFP transceiver all-in-one transceiver because of its miniaturization, easy hot plug and play, support for SFF8472 standard, analog reading convenience (IIC reading), and high detection accuracy ($\pm 2\text{dBm}$ or less) and gradually become the mainstream of the use of the following SFP optical module as.
